

Testing

No application is complete without tests, we have achieved a lot till now and after all this hard work it makes sense to learn testing.

Testing is a huge topic, so we will be covering in phases as we progress with the tutorials.

Testing our home page

Django creates a 'tests.py' file by default for every app, lets start writing our tests for our 'blog' app -

```
blog/tests.py
```

Here we creates tests for -

1. Home page or list view
2. Post detail page

Running Tests

To run all the test -

```
$ python manage.py test
```

For specific app -

```
$ python manage.py test blog
```
