

Finishing Up

We just have to complete our tags list page in order to complete our project.

Sidebar

We have to update the sidebar so that it shows -

1. Recent Questions
2. Top Contributors
3. Pagination

But, luckily we have everything ready from our question list view and index.html template, we simply have to copy and paste all the relevant code to finish our project.

Congratulations!

It's been a long and hard journey, and you truly deserve **appreciation** for making it so far! Learning anything new is always a challenge, and learning a complex framework like Django definitely demands a lot of efforts and dedication.

In the next and final section, we will prepare our project for launch and finally go live! But, before that you deserve a break and indulge yourself.
