

Adding Routes/URL's

Till now we have only added one route for our 'home' page, let us add some more routes.

Open the views file and add the following -

```
pages/views.py
```

```
from django.shortcuts import render

def home_page(request):
    return render(request, 'pages/index.html')

def about_page(request):
    return render(request, 'pages/about.html')

def contact_page(request):
    return render(request, 'pages/contact.html')
```

We also need to update our local urls, open 'urls.py' and update as follows -

```
pages/urls.py
```

```
from django.urls import path

from .views import home_page, about_page, contact_page

urlpatterns = [
    path('', home_page, name='home'),
    path('about/', about_page, name='about'),
    path('contact/', contact_page, name='contact')
]
```

Updating html

We can update our html using the Django Templating Engine for adding the routes to our templates.

Snippet for adding route is as follows -

```
{% url 'route/url name' %}
```

Example, our home route -

```
{% url 'home' %}
```
