Project Templates

We are going to setup all the project templates, copy the files from 'starter' folder to 'static' and 'templates'.

Serving Images

We are currently using the development server that ships with Django, and we need to configure it to serve images.

For that we add the 'media' path to our project urls.

```python
from django.conf import settings
from django.conf.urls.static import static

if settings.DEBUG:
    urlpatterns += static(settings.MEDIA_URL,
                          document_root=settings.MEDIA_ROOT)
```

Ref - Serving Files During Development

Note, this approach is only suitable during development.
